

QA Audit – Artefact Declaration Form

Requirements Engineering Process Audit Biometric Student Attendance System

Issued by: **Paragon Assurance** | Addressed to: **Nevon Solutions and BioSec Educational Institution**

Form Reference	QA-DECL-001	Audit Report Ref.	PA-QA-2026-001
Date Issued	17 March 2026	Response Due	_____
Issued By	Zong Han, PA-QA-001	Responded By	_____

Purpose. This form is issued by Paragon Assurance as part of the QA audit of the Requirements Engineering (RE) process conducted by Nevon Solutions for the Biometric Student Attendance System project, commissioned by BioSec Educational Institution (Customer P1-BIOSEC).

The QA audit identified artefacts that were expected to be present in the project repository but were absent or non-compliant at the time of inspection. **Nevon Solutions** is required to either upload the outstanding vendor artefacts (Section A) to the repository and confirm this below, or declare that the artefact is non-retrievable. **BioSec Educational Institution** is required to provide or confirm the Customer approver signatures on the SRS sign-off page (Section B, item QA-E05-C).

This declaration is required to formally close the audit findings and maintain the integrity of the process record.

Instructions. For each artefact listed:

- Tick **Retrievable** if the artefact has been committed to the repository or can be produced for review.
- Tick **Non-retrievable** if the artefact cannot be located or no longer exists.
- If **Non-retrievable**, provide a written explanation in the **Declaration** section at the end of this form.

Artefact Checklist

Section A — Vendor Artefacts (Nevon Solutions)

Artefact Required	Retrievable	Non-retrievable
[QA-E01] Project Specification (BS-PS-2026-001, Version 1.0, 30 January 2026) committed to the project repository, confirming that the vendor held the PS prior to and during the Analysing method. <i>Relates to finding QA-FND-002.</i>	☐	☐
[QA-E02] Analysing Report (NS-AR-2026-001, Version 1.0, dated 8 February 2026), as referenced in SRS Section 1.5 and Section 1.3, committed to or made accessible for audit review. The SRS (Section 1.3) stated this document “will be made available separately”; it was not present in the materials reviewed. <i>Relates to finding QA-FND-003.</i>	☐	☐

Artefact Required	Retrievable	Non-retrievable
[QA-E03] Issue Resolution Checklist (IRC) for the Analysing phase, demonstrating that each clause of the Project Specification was systematically reviewed, issues recorded, and outcomes documented. The IRC is the primary evidence of a disciplined, clause-by-clause Analysing process. <i>Relates to finding QA-FND-004.</i>	☐	☐
[QA-E04] Inceptive Requirements Traceability Matrix (iRTM) extracted and committed as a standalone, editable file (Excel or Word) to the project repository, separate from the SRS PDF in which it is currently embedded (Appendix D). The SRS (Section 7) describes the iRTM as a living document to be extended through subsequent SDLC stages; this requires it to be in a format that can be updated independently of the SRS. <i>Relates to finding QA-FND-005.</i>	☐	☐

Section B — SRS Sign-off Artefacts

Artefact Required	Retrievable	Non-retrievable
[QA-E05-V] Completed SRS sign-off page (SRS Section 9) with signatures and dates from the two outstanding Vendor designated approvers: • James Koh – Vendor Technical Lead • Rachel Lee – Vendor System Architect Lead The SRS sign-off page currently reflects only one of five required signatures (Vendor Authenticator). Both Vendor approvers above show no signature or date. <i>Relates to finding QA-FND-001.</i>	☐	☐
[QA-E05-C] Completed SRS sign-off page (SRS Section 9) with signatures and dates from the two outstanding Customer designated approvers: • Marcus Tan Wei Liang – BioSec Project Manager • Daniel Rodriguez – BioSec Head of Operations Both Customer approvers on the sign-off page show no signature or date. <i>Relates to finding QA-FND-001.</i>	☐	☐

Declaration – Non-retrievable Artefacts

For each item marked Non-retrievable above, provide a brief explanation below. State the artefact reference (e.g. QA-E01), the reason the artefact cannot be produced, and whether any partial or substitute evidence is available.

Item	Explanation (reason artefact cannot be retrieved; any substitute evidence)
QA-E01	
QA-E02	
QA-E03	
QA-E04	
QA-E05-V	
QA-E05-C	

Vendor Sign-off – Nevon Solutions

By signing below, the authorised representative of Nevon Solutions confirms that the above responses for Section A and QA-E05-V are accurate and complete, and that all artefacts marked Retrievable have been committed to the repository at the location stated.

Name	Role	Signature	Date

Nevon Solutions – Authorised Respondent

Customer Sign-off – BioSec Educational Institution

By signing below, the authorised representative of BioSec Educational Institution confirms that the above responses for QA-E05-C are accurate and complete, and that the Customer approver signatures on the SRS sign-off page have been provided or a written declaration of non-retrievability has been submitted above.

Name	Role	Signature	Date

BioSec Educational Institution – Authorised Respondent

Return instructions. Both Nevon Solutions and BioSec Educational Institution are required to complete and return this form. Return the completed form, together with any repository commit confirmation or upload evidence, to the QA Auditor at Paragon Assurance (Zong Han, PA-QA-001) by the response due date above. Findings for which neither a retrieved artefact nor a signed declaration is received by the due date will remain open in the final QA Audit Report.
